

## High Voltage TFT-LCD Logic Driver

The ISL24011 is a high voltage TFT-LCD logic driver with a +40V and -20V (momentary absolute max) output voltage swing capability. It is manufactured using Intersil's proprietary monolithic high voltage bipolar process and is capable of driving a 4700pF load in 500ns.

The ISL24011 will level shift a digital input signal to an output voltage nearly equal to its output supply voltages. The ISL24011 has 3 supplies.  $V_{ON1}$  and  $V_{ON2}$  are positive supplies with a voltage range between +10V and +40V (absolute max).  $V_{OFF}$  is the negative supply with a voltage range between -5V and -20V (absolute max). Outputs 1 through 6 are connected to  $V_{ON1}$  and  $V_{OFF}$ . Outputs 7 and 8 are connected to  $V_{ON2}$  and  $V_{OFF}$ . This configuration enables outputs 1 through 6 to provide slicing to the row drivers to reduce flicker, and outputs 7 and 8 to control possible supply lines.  $V_{ON2}$  should remain constant. It is possible to tie  $V_{ON1}$  and  $V_{ON2}$  supplies together, if independent control as described above is not desired.  $V_{ON2}$  is required to be greater than or equal to  $V_{ON1}$  at all times.

The ISL24011 is available in a 20 Ld TSSOP package. It is specified for operation over the -40°C to +85°C industrial temperature range.

## Ordering Information

| PART NUMBER          | PART MARKING | TEMP. RANGE (°C) | PACKAGE                              | PKG. DWG. # |
|----------------------|--------------|------------------|--------------------------------------|-------------|
| ISL24011IVZ (Note)   | 24011IVZ     | -40 to +85       | 20 Ld TSSOP (Pb-free)                | M20.173     |
| ISL24011IVZ-T (Note) | 24011IVZ     | -40 to +85       | 20 Ld TSSOP (Pb-free)<br>Tape & Reel | M20.173     |

NOTE: Intersil Pb-free plus anneal products employ special Pb-free material sets; molding compounds/die attach materials and 100% matte tin plate termination finish, which are RoHS compliant and compatible with both SnPb and Pb-free soldering operations. Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.

## Features

- 0V to 5.5V (absolute max) Input Voltage Range
- +40V and -20V (momentary absolute max) Output Voltage Range
- 10mA Output Continuous Current (all 8 channels)
- 25mA Output Peak Current (all 8 channels)
- Rise/Fall Times 260ns/290ns
- Propagation Delay 230ns
- 50kHz Input Logic Frequency
- 20 Ld TSSOP Pb-Free Package
- Pb-Free Plus Anneal Available (RoHS Compliant)

## Applications

- TFT-LCD panels

**CAUTION:** Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

**NOTE:**

1.  $\theta_{JA}$  is measured with the component mounted on a HIGH effective thermal conductivity test board in free air. See Tech Brief TB379 for details.

**IMPORTANT NOTE:** All parameters having Min/Max specifications are guaranteed. Typical values are for information purposes only. Unless otherwise noted, all tests are at the specified temperature and are pulsed tests, therefore:  $T_J = T_C = T_A$

**Electrical Specifications**  $V_{ON} = 22\text{V}$ ,  $V_{OFF} = -5\text{V}$ ,  $T_A = -40^\circ\text{C}$  to  $+85^\circ\text{C}$  Unless Otherwise Specified. Typical values tested at  $25^\circ\text{C}$

## Application Information

### General

The ISL24011 is an octal voltage level shifter. The part was designed to level shift a digital input signal to +22V and -5V for TFT-LCD displays and is capable of level shifting input logic signals (0V to 5.5V) to outputs as large as +40V and -20V.

### Power Supply Decoupling

The ISL24011 requires a  $1.0\mu\text{F}$  decoupling capacitor as close to the  $V_{ON1}$ ,  $V_{ON2}$  and  $V_{OFF}$  power supply pins, as possible, for a large load equal to  $5\text{k}\Omega$  in parallel with  $4700\text{pF}$  (Figure 16). This will reduce any  $dv/dt$  between the different supplies and prevent the internal ESD clamp from turning on and damaging the part.

For lighter loads such as a series  $200\Omega$  resistor and a  $3300\text{pF}$  capacitance, the decoupling capacitors can be reduced to  $0.47\mu\text{F}$ .

### Power Supply Sequence

The ISL24011 requires that  $V_{ON2}$  be greater than or equal to  $V_{ON1}$  at all times. Therefore, if  $V_{ON1}$  and  $V_{ON2}$  are different supplies, then  $V_{ON2}$  needs to be turned on before  $V_{ON1}$ . The reason for this requirement is shown in Circuit 4 in the Pin Description Table. The ESD protection diode between  $V_{ON2}$  and  $V_{ON1}$  will forward bias if  $V_{ON1}$  becomes a diode drop greater than  $V_{ON2}$ . Recommended power supply sequence:  $V_{ON2}$ ,  $V_{ON1}$ ,  $V_{OFF}$ , then input logic signals.

The ESD protection scheme is based on diodes from the pins to the  $V_{ON2}$  supply and a  $dv/dt$ -triggered clamp. This  $dv/dt$ -triggered clamp imposes a maximum supply turn-on slew rate of  $10\text{V}/\mu\text{s}$ . This clamp will trigger if the supply powers up too fast, causing amps of current to flow. Ground and  $V_{ON1}$  are treated as I/O pins with this protection scheme. In applications where the  $dv/dt$  supply ramp could exceed  $10\text{V}/\mu\text{s}$ , such as hot plugging, additional methods should be employed to ensure the rate of rise is not exceeded.

### Latch-up Proof

The ISL24011 is manufactured in a high voltage DI process that isolates every transistor in its own tub making the part latch-up proof.

### Input Pin Connections

Unused inputs must be tied to ground. Failure to tie unused input pins to ground will result in rail to rail oscillations on the respective output pins and higher unwanted power dissipation in the part. Under these conditions, the temperature of the part could get very hot.

### Limiting the Output Current

No output short circuit current limit exists on this part. All applications need to limit the output current to less than  $80\text{mA}$ . Adequate thermal heat sinking of the parts is also required.

## Application Diagram (TV)

FIGURE 14. TYPICAL TV APPLICATION CIRCUIT

## Application Diagram (Monitor)

FIGURE 15. TYPICAL MONITOR APPLICATION CIRCUIT WITH SLICER TO REDUCE FLICKER

## Test Circuit

If the output load is a series  $200\Omega$  resistor and a  $3300\text{pF}$  then C1, C2 and C3 can be reduced to  $0.47\text{pF}$ .

## Thin Shrink Small Outline Plastic Packages (TSSOP)

### NOTES:

- These package dimensions are within allowable dimensions of JEDEC MO-153-AC, Issue E.
- Dimensioning and tolerancing per ANSI Y14.5M-1982.
- Dimension "D" does not include mold flash, protrusions or gate burrs. Mold flash, protrusion and gate burrs shall not exceed 0.15mm (0.006 inch) per side.
- Dimension "E1" does not include interlead flash or protrusions. Interlead flash and protrusions shall not exceed 0.15mm (0.006 inch) per side.
- The chamfer on the body is optional. If it is not present, a visual index feature must be located within the crosshatched area.
- "L" is the length of terminal for soldering to a substrate.
- "N" is the number of terminal positions.
- Terminal numbers are shown for reference only.
- Dimension "b" does not include dambar protrusion. Allowable dambar protrusion shall be 0.08mm (0.003 inch) total in excess of "b" dimension at maximum material condition. Minimum space between protrusion and adjacent lead is 0.07mm (0.0027 inch).
- Controlling dimension: MILLIMETER. Converted inch dimensions are not necessarily exact. (Angles in degrees)
