DESCRIPTION

The LD2982 is a 50mA fixed output voltage regulator. The ultra low drop voltage and the low quiescent current make them particularly suitable for low noise, low power applications, and in battery powered systems. In sleep mode quiescent current is less than 1mA when INHIBIT pin is pulled low. Shutdown Logic Control Function is available on pin 3 (TTL compatible). This means that when the device is used as local regulator, it is possible to put a part of the board in standby, decreasing the total power consumption.
AN internal capacitor connected to the bypass pin C_{OUT} 30mVrms.
Typical application are in cellular phone, palmtop/ laptop computer, personal fdigital assistant (PDA), personal stereo, camdorder and camera.
